VLVbio – Liver Health Solutions

CREATING A WORLD **WITH NO UNDIAGNOSED LIVER DISEASES**

The right to good health is a fundamental human right. Therefore we strive to offer and facilitate high-quality biomarker assays to detect and measure liver disease in an effective, sensitive and cost-effective way.

M30 Apoptosense® in MASH

The M30 Apoptosense® ELISA can be used as an aid in diagnosing patients with MASH which would allow for an early identification of patients at risk of developing late stage liver disease and would benefit from specialist care.

Diagnosing MASH also allows an earlier intervention prior to the onset of fibrosis and severe liver injury.

Q-LINEA

Hours, not days

We are improving sepsis treatment and safeguarding the effectiveness of antibiotics for generations to come. ASTar® is our FDA 510(k) cleared rapid AST system, fully automated and delivering results directly from positive blood cultures.

Antibiotikaresistens

En global kris som hotar människors liv och hälsa.
Kallas ibland för den tysta pandemin.

Q-LINEA

Antibiotikaresistens innebär att en mikroorganism har utvecklat motståndskraft mot ett eller flera läkemedel. En infektion orsakad av en resistent bakterie riskerar att bli mycket svårbehandlad. Om infektionen kvarstår i kroppen ökar risken för spridning till andra. När inget annat fungerar krävs användning av så kallade sista linjens antibiotika. Resistens mot sista linjens antibiotika minskar möjligheten att överleva svåra infektionssjukdomar och påverkar annan livsviktig vård, som cancerbehandling.

Ju mer antibiotika vi använder, desto snabbare ökar antibiotikaresistensen.

Every flight has a hidden potential, we help you find it.

Unlock real-time weather and flight data that saves fuel, time & cost, and improves safety.

ClearPath Safety
ClearPath Optimizaton
Accuracy, operational efficency, Punctuality
Optimize your flight with Automatic real-time wind uplinks directly to the FMC
By reducing the wind error in the FMS, Aventus enables more precise cruise and descent planning, including more accurate top-of-descent calculations, resulting in safer, more efficient, and more predictable operations.

AVTECH

Unlock real-time weather and flight data that saves fuel, time & cost, and improves safety.

We help you protect your margins.

Every day, flights take off with imperfect information. Outdated wind data. Suboptimal descent profiles. Weather hazards identified too late. Combined, this costs the industry billions..

AVTECH was built on a simple belief: give flight crews better data at the right moment, and they make better decisions. Better decisions mean less fuel burned, lower emissions, and safer skies. We've been proving that belief with real airlines, on real routes, for over 30 years - delivering measurable results from day one, with no new hardware and no disruption to your operation.
